Introduction

Android IP Video Phone D800 Overview

With Attachment

Item	Function
Power Adapter	Power supply for telephone.
Network Cable	Used to access network for the phone.
Handset	Make phone calls with the phone's basic functions.
Handset Line	Connected with the Handset and the phone.

Phone component descriptions

Key	Function
Q	Search key. Tap the key and you can enter the search interface.
	Option key. You can browse and accomplish all functions
	of the phone through pressing this key.Return key. Press this button in the detailed interface, it
5	will return to the previous interface; If it is pressed in the application program interface, the current program will be closed.
<u></u>	Home key. Press this key, the phone will return to the idle screen.
	Volume control key. Turn down or turn up all kinds of volume by pressing these two keys.
	Mute key. In the call mode, press this key in calling mode, you can hear the other side, and the other side cannot hear you; press this button again to leave this mode. When the phone call is ringing, press this button to turn off the ring tips.

Android IP Video Phone D800 User Manual

ОК	Confirm key.			
Delete	Delete key.			
R/Send	R/Send key. Use the key to dial the last call number. It also could be used to make a phone call by sending a phone number.			
Navigation key.				
Menu key.				
Phone book. Tap to enter the contacts interface.				
Called	Call log. Tap to see call logs.			
Headset	Headset key.			
Time IDE IDE Time IDE IDE	Digital keyboard.			
Et l	The hands-free key.			

The Installation of backplane

• Set the telephone in horizontal

The back plate is horizontally placed in the telephone at the bottom, and makes the phone and joint part of the two screws tightened, right now its steady level placed on the desktop.

Interface introduction

Interface illustration picture 1

	Name	Meaning
(Left first)	SD Card interface	Connect SD Card for saving data.
(Left second)	DC Power Interface	Input: 220V AC Output: 12V DC
(Left third)	LAN Network interface	Specification RJ45, connect it computer.
(Right third)	WAN Internet interface	Specification RJ45, connect it to network.
(Right second)	PSTN Normal phone interface	Specification RJ11, connect the general public telephone network.(Not available)
(Right first)	Handset interface	Specification RJ9, used to connect the Handset to the phone.

	Name	Meaning
(Left first)	USB interface.	Connect it to USB disk.
(Center)	Headset interface.	Connect the Headset.
(Right first)	HDMI interface.	Interface for high-definition audio and video. A-A interface, A to A interface.

• Note:

1. Put the handset line into the handset interface according to the interface illustration picture.

2. Install the backplane to the bottom of the phone with the above methods.

3. Plug the power adapter into the DC port; poke the other side of the power adapter into an electric socket.

4. Insert one end of RJ45 network cable into the phone's WAN port (Please refer to the interface illustration picture 1) and put the other end into the network equipment. After that, if the network connection status on the status

bar is displayed as , actions such as making some telephone calls and surfing the internet could be done. If the network connection status on the

status bar is displayed as , please verify whether the network was configured correctly and the network cable was plugged in correctly.

Touch Screen Description

You can touch the screen manually to complete the corresponding operation. Here are three ways to use:

Click: Any icon or button can be clicked to realize its function.

Click the icon

Click the "Application" icon, and then it will jump to the following interface.

Long press:

- Long press the idle desktop. After that, an option box could be popped up, and then you can do more according to the prompt.
- Long press one list such as a list of contact list. After that, another option box could be popped up, and then you can do more about this list according to the prompt.

Picture:

Θ	Add to Home Screen
1	Shortcuts
0	Widgets
*	Folders
	Wallpapers

Slide:

Slide your hand on the screen upward or downward slowly to move the

interface on the screen.

On some kinds of screen such as idle desktop, you can switch the desktop just by moving your fingers on the screen to left or right. Dragging your finger to slide will not select or activate anything on the screen.

You can just wait or gently press any place of the screen to stop the sliding after your fingertips rapidly sliding on the screen. Gently pressing or touching to stop the scrolling will not select or activate anything on the screen.

Update of the phone

Please contact with service provider to get the new version to upgrade. **Auto provision:** Keep phone registered successfully and configure parameters about automatic updates such as server address, upgrade file name, time interval and so on. And then the phone will check for updates from the server at a fixed time intervals and upgrade itself. See the specific automatically upgrade instructions, please switch to <u>Update</u>.

Manual update: USB update

USB update. It has two update methods:

1. Create a directory named "imp install" in the USB disk, and copy the update file to this directory, and then insert the USB into the phone. The phone will

automatically compare the update image, if the image name is different from the phone has, it will automatically update. (Upgrade where needs to be updated)

2. Create a directory named "imp Linux" in the USB disk, and copy the update file to this directory, and then insert the USB into the phone. The phone will automatically compare the update version number in the U disc and telephone after rebooting. Then it will automatically upgrade just as the version number and the image in the U disc is different. (Upgrade all system)

Basic Function

Screen Keyboard

If you need to input, click on the input box. A screen keyboard will automatically be displayed. (Every input method has its own unique screen keyboard).For instance:

	rd to dial							
								Do
								13
q	w	e	r I		/			0 F
q a	w s	e d	r t	t y	/ 1 h	u J	i k	0 F
and the second strength of the second strengt						j n		• F

Press the return key to close the screen keyboard after finishing the input. **Input Text:**

- 1. Tap the text field.
- 2. Tap the screen keys on the keyboard.

Type in capital letters	Shift key, tapping shift key can switch the
	uppercase and lowercase.
Delete character	Delete character, tab
	you want to delete many characters, tap this icon

	for a long time.	
Type in digital, punctuation and	Tap key to switch to digital, punctuation and	
symbols	symbols input interface.	
Space	Space symbol.	
Enter	Enter symbol, tap this key to switch to next line.	

Status Bar

All of the status information about Android IP Video Phone D800 is displayed on the top of the screen. You can click on the notification icon in the left of the status bar or drag down the drop-down list with your fingers to enter the notification panel to further review and deal with all of the information. **Note: The right icon of the status bar can't be drag, just the left can.**

Status bar		Meaning
The right icon of the status bar		
	Handset mode	Indicates that the phone is in the handset mode.
6	Headset mode	Indicates that the phone is in the headset mode.
Ô	Silent mode	Shows that the phone is in silent mode. This mode can be canceled by directly clicking the mute button when the screen is in the idle interface.
\mathbf{P}	Hands-free mode	Indicates that the call is in hands-free status.
\bigotimes	Alarm clock	If you set an alarm clock, the alarm clock icon will display on the status bar.
The lef	t icon of the status bar	
P	Network status (successful)	Displays that the network connection is successful. Tap the icon directly into the network settings.
	Network status (failed)	Shows no network connection. You need to check the network is properly connected and the parameters are configured correctly.
i.	USB	Displays that the phone successfully identifies the USB device. Tap the icon directly to switch into the USB application wizard.

3	New call	When the phone has a new call, it will appear in the status bar.
Ŀ	Missed call	Shows that there are several missed calls. You can click on the icon directly to switch into the call log.
ĸ	Do not disturb	Shows that the phone is on Do Not Disturb mode. Any of the call could be directly rejected before it's ring interface appears. There is only a missed call icon leaving in the status bar.
٢	Call forward	Shows that the call forward function is opened.
٢	Auto answer	Shows that the auto answer function is opened.
1	Black list	If a phone number is added to the firewall, then open the firewall function, all calls about this phone number could be rejected directly.
•	New record	Indicates that there are several new unread phone recordings.

Main Screen

Android IP Video Phone D800 will go directly to the main screen after rebooting.

The main screen contains three idle interfaces. Each one can display some programs shortcuts. You can switch the desktop just by moving your fingers on the screen to left or right.

Default Screen:

The idle interface

The icon at the upper left of the idle interface is the phone status icon. It can display some state including network connection status and the registration status of each line in time.

You can slide your fingers on this interface to glance over all of the applications. You can click on some program icons to open the corresponding application program.

The application program interface

If you want to delete application shortcuts on the idle interface, you can long press the shortcut, and then put it into the dustbin at the bottom of the interface.

(Note: Let it go just as the icon and the dustbin turned red as is shown at the

following picture.)

The Application of Android

Phone

D800's Function:

Phone	Click this icon, and it will switch to pre-dial interface. You can make some phone calls through the screen or keyboard.
F mail	Has the function of sending and receiving e-mail. When an account has been configured successfully, you can send and receive your e-mail on the phone and this account will automatically sync the contacts to the mailbox account.
Settings	It contains System, Network, Account, Call, Display and so on. You can configure some settings.
Calculator	Work with simple calculation operations such as add, subtract, multiply, divide and some advanced operations.
I Note pad	Record a number of important events or you can record information such as phone number when press the "Note pad" during a call.

V Memory Key	You can make a rapid call through your contacts in the memory key.
Contacts	Support functions such as search, add, remove and edit.
	You can surf the internet through this browser as convenient as a computer.
Browser	Provide call recording and the ordinary recording.
Alarm	You can set your own time and the alarm will remind you at your appointed time.
Android settings	It contains the Call settings, Basic settings, Advanced settings, VOIP and so on, you can configure some settings in the corresponding menu.(Android system settings)
Gallery	View photos stored on the phone, or through the USB storage device storing photos or videos, you can enter the photo gallery for dynamic playing.
File Manager	You can easily manage the files.
	Through the camera you can take High-definition pictures and make other operations.

Camera

Message	Like the mobile phone, with messages to write, read and send function.
	Music player. It can play music in various formats.
Music	
MWI	All calls will be transferred into voice mail when the MWI is enabled.
Screen Calibration	Calibrate the screen to ensure the accuracy of the screen.
Calendar	Enter into the calendar and you can view the accurate date.
Call log	Enter the call log and you can view all call records. You can also view the "Incoming Calls", "Outgoing Calls" and "Missed Calls" records by pressing the Option key.
Ping Box	Ping box is the system's built-in toolbox of network testing tool; You can use it to check whether the network is unobstructed.
C Screen Off	The shortcut of close the screen.
Reboot	The shortcut to reboot the phone quickly.

Desktop Widgets

Operation steps:

Long press the idle screen and the list named "Add to Home Screen" will appear. Tap the "Widgets" and then choose the widgets you want to display on the desktop. It is easy to quick operate which saves the time and look beautiful.

> It can control the power light to turn on or turn off. If the power light is turned off, like the first picture. As this time whether making calls or doing other operations, power light is often destroyed.

Power indicator

or If power light is turned on, like the second picture. As this time when the telephone is called or it has missed calls, the power

light will twinkle; when the telephone is calling or in the idle

status, the power light have been always light; when the telephone has one call, then another call is ringing, the power light will twinkle.

Idle screen display:

Light off Light On

Analog clock

Analog clock which looks like a watch can be displayed on any space of the idle screen; it is convenient for you to check the time.

Digital clock is displayed with white fonts and time or date could be seen directly. You can move it to any space.

3:56

Digital clock Idle screen display:

The default search bar is the Google's Quick Search Box; You can enter any content you want to search. Idle screen

Search

display:

Google

It controls four functions: DND, Call forward, Auto answer, Blacklist. You can make some settings quickly just by clicking the button to turn on or turn off the function.

Idle screen display:

Call set

DND Call forward Call firewall Auto answer

Contents of

This widget shows the network connection status and the registration status of each line.

network connection status:

It shows the network connection modes and IP information if it is successful. But it shows "Network disconnect" once it is failed.

Statue

Registration status:

Phone status

lamn	Contents of	Status	
lamp	registration		
gray	null	not registered	
red	phone number@	Failed	
red	server address		
	phone number@	successful on the main	
green	server address	server	
	phone number@	successful on the	
yellow	backup server address	backup server	

Idle screen display:

You can display anyone of your favorite picture on the idle screen through this picture frame.

Picture frame

Idle screen display:

Long press the idle screen, and the "Add to Home Screen" list will be popped up, tap "Folders" and enter to the "Select folder" list, select the appropriate file to add to the **desktop:**

New folder	You can move the application shortcuts on the desktop to the new folder.

Starred contacts	Show favorites contacts in it; tap a contact to view detailed information.
Contacts with phone numbers	It will show the contact which has the number and do not show the contact which has no phone number.

Settings

Status

Tapping "Settings" can directly enter the default window "Status". It displays the current state.

Status	PPPoE	Disabled	Phone model	D800
Network	Connection mode	DHCP	Account 1	Not configured
Network	IP address	192.168.1.44		Unapplied
Accounts	Subnet mask	255.255.255.0	Account 2	Not configured
- 11	IP gateway	192.168.1.1		Unapplied
Call	Primary DNS	208.67.222.222	Account 3	Not configured
Display	Secondary DNS	208.67.220.220		Unapplied
	MAC address	00:A8:59:C5:29:FA	Account 4	Not configured
Tone	Version	2.2.10.6.1		Unapplied

Status interface

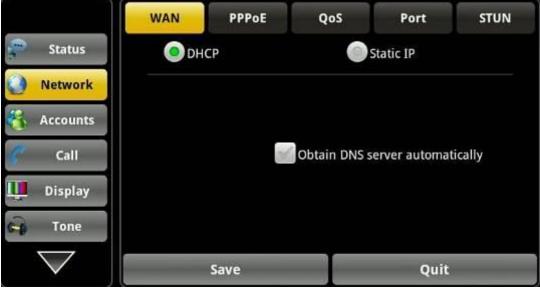

Configuration item	Meaning	
PPPoE	Displays the connection status of the PPPoE, there	
	are three display states : Disable, Connection and	
	the IP address.	
Connection mode	Displays the selected network mode, DHCP or Static	
	IP.	
IP address	Displays the IP address of the current network	
	model.	
Subnet mask	Displays the Subnet Mask of the current network	
	model.	
IP gateway	Displays the default gateway of the current network	
	model.	
Primary DNS	Displays the primary DNS server address of the	
·	current network model.	
Secondary DNS	Displays the standby DNS server address of the	
·	current use of the network model.	
MAC address	Displays the current MAC address.	
Version	Displays the current version of the phone.	
· · · · · · · · · · · · · · · · · · ·	Displays the current version of the phone.	

Phone model	Displays the current phone model.	
Account	Displays the current configuration of the Account	
	and more detailed information will be displayed on	
	the desktop widget.	

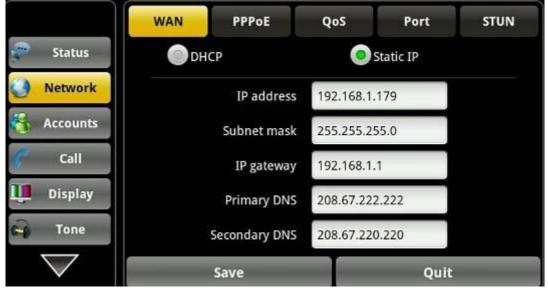

Network

Network

Tap "Network"----> "WAN mode" interface, the default interface is "DHCP": click "Save" button to save successfully after the configuration of each interface is finished. Then a tip box "save successfully" will be shown.

DHCP interface

Static IP interface

Configuration	Meaning
DHCP	Under the default situation the phone attempts to contact a DHCP Server in your network in order to obtain its valid network settings, e.g. IP address, sub mask, gateway, DNS server, etc.
	Obtain DNS server automatically: If you enable
	it ,the DHCP server will send the phone the DNS address which could used by it when it is assigned a DHCP ip address
Static IP	If your phone cannot contact a DHCP Server for any reason, you need to enter the network settings manually via Static IP Address.
	IP address: Input your assigned IP address.
	Subnet mask: Input your assigned subnet mask.
	IP Gateway: Input your assigned gateway.
	Primary DNS: Input your assigned DNS server
	address.
	Secondary DNS: Input your assigned Secondary
	DNS server address.

PPPoE

Tap "Network" ----> "PPPoE". After configuring the parameters, you can click "Save" button to save successfully.

PPPoE interface

Configuration	Meaning
PPPoE	User: Input your assigned PPPoE Username.
	Password : Input your assigned PPPoE Password.
	Auto connect on power up: Whether to
	automatically connect PPPoE on power up.
	Auto reconnect: When connecting failed whether to
	automatically connect PPPoE.
	Enabl PPPoE: Whether to enable PPPoE.
	After the parameter configuration is completed, if
	you do not select "enable PPPoE", then you can
	click on the "save" button, it only saves the
	configuration parameters; but if you select "enable
	PPPoE" and click "save" button, it can
	immediately use the PPPoE mode to connect the
	network, at the same time it will pop up PPPoE
	connection box, clicking the "disconnected" will
	pop up PPPoE configuration frame; if you click
	"connect", it will reconnect PPPoE; if you click
	"Cancel" button, it will only save the
	configuration parameters which have been set, not to
	enable PPPoE connection.

QoS

Tap "Network"----> "QoS", after selecting or modifying the default settings click the "Save" button to save successfully.

	WAN	PPPoE	QoS	Port	STUN

Display name: Configure the display name, it allows the English alphabet input (does not support Chinese).

Server name: Configure the SIP register server name.

Server port: Configure the SIP register server port.

Registration expires: Configure the server registration expire(s), default is 60 seconds. If the registration time of the server required is greater or less than the time of the phone to configure, telephone can automatically modify to the time limit that server recommended, and register again.

DTMF type: Select DTMF type, there are four types:

DTMF_RELAY

DTMF_RFC2833

DTMF_SIP_INFO

DTMF_AUTO

Different server vendors can provide different models.

RFC protocol edition: Configure the protocol version of the phone. When your phone needs to communicate with gateway which uses SIP1.0,

such as CISCO5300, you need to configure to
RFC2543 to conduct normal communication.
RFC3261 is used by default.
Anonymous call edition: Configure whether to
use anonymous security call. It supports
RFC3323 and RFC3325.
Transport protocol: Configure the transport
protocol, TCP or UDP
Ban anonymous call: Configure whether to ban
anonymous call.
Enable strict proxy: Compatible with special
server. (Using source address of opposite side
when return message, no longer use the address
in via field).
Subscribe for MWI: After successful
registration, you can subscribe to information,
such as someone else's status or voice mail and so
on.
Enable report: Configure whether to support
RFC3581, report mechanism is used in internal
network, and requires a SIP server to support, it
is used for keeping the NAT connect of the
internal network and the external network.
Enable PRACK: Configure whether to support
SIP-PRACK function (used by "Color Ring Back
Tone") Recommend: Use the default
configuration.
Convert URI: When you send URI it will
convert # to %23.
Enable DNS SRV: Configure whether to enable
RFC2782 protocol edition.
Set to make quotation mark to display name as
the phone sends out signal, in order to be
compatible with server.
Enable display name quote: Set to make
quotation mark to display name as the phone
sends out signal, in order to be compatible with
server.
Enable STUN: Enable/Disable SIP STUN.
Enable BLF List: Enable/Disable BLF List.
BLF List number: Input the URL of BLF List.
Enable session timer: Enable/Disable session
timeout.

Session timeout(s): Set the time of session timeout.

Backup server address: Configure a backup server address. When the primary server is not connected, you can use the backup server for calling communications (The backup server can be connected only when the primary server cannot connect); When the primary server is connected, the phone will automatically switch back to the primary server to communicate. **Backup server port:** Configure the backup server port.

Call

After configuring the parameters of each interface, you can click "Save" button to save successfully.

General

Tap "Call" ----> "General" interface. After configuring the parameters, you can click "Save" button to save successfully.

Tone	-			-		
		Save		_	Quit	

Configuration item	Dial plan interface Meaning
Dial plan	Enable E164: Enable/Disable E164. After it is
	enabled, it will directly dial numbers according
	with E164 rules.
	Press # to send: Enable/Disable. After enabling
	the function, input the number end with "#" in the
	non-pre-dial mode, it will directly dial the phone number.
	Dial fixed length to send: Enable/Disable. After
	enabling the function, inputting the number of
	specified length in the non-pre-dial mode will
	make the call directly.
	Send after (3-99): Enable/Disable. After enabling
	the function, input the number in the non-pre-dial
	mode, it will dial the phone number in the
	specified time.
	Dial prefix: Enable/Disable. After enabled the
	function, it will be automatically added the outside
	line prefix number before the outgoing number
	when you are going to call.
	Method to use the prefix: Example
	If you set the prefix is 135856, and you want to
	dial the number 13585679801. Then when you dia
	the number, you can long press 0, when the
	"+" appears, you can just input 79801 and send the
	number, the "+79801" is the numb you input, but you ca
	see the dialing number is 13585679801.

Account

Tap "Call "----> "Account 1, 2, 3, 4". After configured the parameters, you can click "Save" button to save successfully.

Update

Tap "Settings" ----> "Maintain" ----> "Update" interface. After configuring the parameters, you can click "Save" button to save successfully.

Fanvil endpoint supports PnP and DHCP and Phone Flash to obtain the parameters. The PnP and DHCP and Phone Flash are all deployed, endpoint will go by the following process to try to obtain the server address and other parameters, when it boots up:

DHCP option \rightarrow PnP server \rightarrow Phone Flash

Tap "Update", enter the PNP interface:

	Update	Service port	Password	Reset phone	CWMP set
A Language			Plug and Play		
🔴 Date & time		Enable PnP	al.		
Maintain		PnP server	224.0.1.7	5	
Audio		PnP port	5060		
🚟 Video		PnP transport	UDP	~	Next
🚰 Blacklist		PnP interval(h)	1		
		Save		Quit	

Plug and Play interface

Support Common CFG file and MAC-Oriented CFG file and ID-Oriented CFG file auto provision. The endpoints download Common CFG file firstly, and then download MAC-Oriented CFG file or ID-Oriented file.

Configuration	Meaning
Plug and play	Enable PNP: Enable/Disable PNP. Enable PnP by
	selecting it, then the phone will send SIP
	SUBSCRIBE messages to a multicast address
	when it boots up. Any SIP server understanding
	that message will reply with a SIP NOTIFY
	message containing the Auto Provisioning Server
	URL where the phones can request their
	configuration.
	PNP server : Input the PNP Server name. The
	default is 224.0.1.75. It depends on your
	environment.
	PNP port : Input the PNP port number.
	PNP transport: Select the transport protocol,
	"TCP" or "UDP"
	PNP interval (h): Input automatic update interval.
	Unit is hour.

Date & time

Tap the "Basic Settings", and then choose "Date & time" switch to the date and time settings interface.

Configuration item	Meaning
Auto	When enabled, the phone will automatically get the

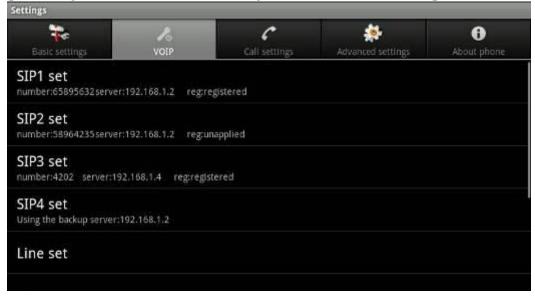

current time through the sntp server.
Configuring the phone to get the sntp server address at the current time.
Set the current date.
Select the current time zone.
Set the current time manually.
When enabled, the time will be displayed in a 24-hour format.
Select the current date format. There are three types for you to choose ("Year - Month - Day", "Day - Month - Year" or "Month - Day - Year").

Note:

You need to configure the available time server address and select the corresponding time zone after enabling "Auto", at the same time you must ensure that the phone is in network status, or it cannot get the correct time.
 After enabling "Auto", you cannot set the time and date manually.

VoIP

Tap "Settings" and select "VoIP Settings" to switch to VoIP setup interface.

Configuration item	Meaning
SIP set	Configure the corresponding registration parameter
SII Set	
	of each sip account, such as sip server address and
	so on, then click "OK" button after configuration is
	completed.
Line set	Configure the corresponding sip line of each line
	key on the phone keyboard.
Voice	Configure voice parameters in the process of calls,
	such as voice coding, whether to enable VAD, etc.
Video	Configure video parameters in the process of video
	calls, such as encoding resolution, frame rate, etc.
QoS	DiffServ enable: Configure whether to enable
	differentiated services.
	DiffServ value: Configure differentiated services
	parameter value, if you set normal level, the value
	is 0x00.
Port	Media initial port(10000-60000):
	Configure the media initial port, this port assigned
	as dynamic allocation.
	(Size 1000060000)
	Media port quantial(100-400):
	Configure the maximum number of RTP port
	allocated, default value is 200.

Attachment: SIP registration parameters introductions:

Configuration item	Meaning	
Server	Set your SIP server address.	
	It supports the address in the form of domain	
	name.	
Account	Set your SIP account.	
Password	Set your SIP password.	
Phone Number	Input the phone number assigned by your VoIP	
	service provider. Phone will not register if there is	
	no phone number configured.	
SIP register	Enable/Disable register.	
	Disable register, Enable register.	
Display name	Configure the display name, it allows the English	
	alphabet input (does not support Chinese).	
Server Name	Configure the SIP register server name.	

Demeter	Configure the CID down in more (4)
Domain realm	Configure the SIP domain name (the user can
	choose not to configure, the system will
	automatically configure).
Server port	Configure the SIP register server port.
Register expire time	Configure the server register timeout(s), default 60
(seconds)	seconds. If the registration time of the server
	required is greater or less than the time of the
	phone to configure, telephone can automatically
	modify to the time limit that server recommended,
	and register again.
DTMF mode	Set DTMF mode, there are four types:
	• DTMF_RELAY
	• DTMF_RFC2833
	• DTMF_SIP_INFO
	• DTMF_AUTO
	Different server vendors can provide different
	models.
RFC protocol edition	Configure the protocol version of the phone. When
	your phone needs to communicate with gateway
	which uses SIP1.0, such as CISCO5300, you need
	to configure to RFC2543 to
	conduct normal communication. RFC3261 is used
	by default.
RFC privacy edition	Configure whether to use anonymous security call.
	It supports RFC3323 and RFC3325.
Transport protocol	Configure the transport protocol, TCP or UDP.
Ban anonymous call	Configure whether to ban anonymous call.
Enable strict proxy	Compatible with special server. (Using source
	address of opposite side when return message, no
	longer use the address in via field).
Enable subscribe	After successful registration, you can subscribe to
	information, such as someone else's status or voice
	mail and so on.
Enable via rport	Configure whether to support RFC3581, rport
	mechanism is used in internal network, and
	requires a SIP server to support, it is used for
	keeping the NAT connect of the internal network
	and the external network.
Enable prack	Configure whether to support SIP-PRACK
	function (used by "Color Ring Back Tone")
	Recommend: Use the default configuration.
Enable uri convert	When you send URI it will convert # to %23.
Enable DNS SRV	Configure whether to support RFC2782 protocol
	101

	edition.	
Enable display name	Set to make quotation mark to display name as the	
quote	phone sends out signal, in order to be compatible	
	with server.	
Enable CLIR	Enable/Disable CLIR	
Use stun	Enable/Disable SIP STUN;	
Stun Server	Configure the SIP STUN server address.	
Stun port	Configure the SIP STUN server port.	
Backup server	Configure a backup server address. When the	
	primary server is not connected, you can use the	
	backup server for calling communications (The	
	backup server can be connected only when the	
	primary server cannot connect); When the primary	
	server is connected, the phone will automatically	
	switch back to the primary server to communicate.	
Backup server port	Configure the backup server port.	

Voice coding settings parameters:

Configuration item	Meaning	
First codec	Set the first priority in the use of voice coding.	
Second codec	Set the second priority in the use of voice coding.	
Third codec	Set the third priority in the use of voice coding.	
Fourth codec	Set the fourth priority in the use of voice coding.	
Fifth codec	Set the fifth priority in the use of voice coding.	
Sixth codec	Set the sixth priority in the use of voice coding.	
Seventh codec	Set the seventh priority in the use of voice coding.	
Eighth codec	Set the eighth priority in the use of voice coding.	
G729 payload length	Set G729 codec payload length.	
DTMF payload type	Set DTMF payload type, values between 96 and	
	127.	
ILBC payload type	Set ILBC payload type, values between 96 and	
	127.	
ILBC payload length	Set ILBC payload length.	
G723 bit rate	Set the rate of G723, you can choose 5.3kb / s or	
	6.3kb / s.	
VAD	Silence detection; If you enabling VAD function,	
	then the G.729 payload length cannot be set greater	
	than 20ms.	

Video encoding settings parameters:

Configuration item	Meaning
Accept video mode	Set accept video mode during a video call.
	Three ways for choice:

	"Manual accept video", "Auto accept video" and	
	"Auto reject video".	
First video codec	Set the first priority in the use of video coding.	
Second video codec	Set the second priority in the use of video coding.	
Third video codec	Set the third priority in the use of video coding.	
Video packet size	Set the size of a single video packet during the	
	video call	
H.264 payload type	Set payload type of H.264, value between 96 and	
	127.	
Mpeg4 payload type	Set payload type of Mpeg4, value between 96 and	
	127.	
Video resolution	Set video encoding resolution during a video call,	
	There are three ways for choice: QCIF, CIF and	
	4CIF.	
Media Bandwidth	Set the media bandwidth of receiving video during	
	a video call.	

Call settings

Tap "Settings" and select "Call settings" switch to the Call interface.

Android settings			-	
Basic settings	VOIP	Call settings	Advanced settings	about phone
Default calling n	node			0
Default answeri Audio	ng mode			۲
Call firewall				
Do not disturb				
Call waiting				S

Configuration item	Meaning	
Default calling mode	Set the default call mode of the phone, Audio or	
	Video.	
Default answering	Set the default answer mode of the phone, Audio or	
mode	Video.	
Blacklist	Whether to enable the firewall. After enabling the	
	function, there will be a notification note in the	
	status bar. When a number is added to the firewall,	

	the telephone will automatically reject all incoming calls of this number, at the same time there won't
	be any note.
	Click to view all the firewall numbers successfully
	added, at the same time, you can click a firewall
	number to delete in check process; you can also
	add and delete by the menu option.
Do not disturb	Enabled the "DND", the phone will not allow
	incoming phone calls, but the notification about
	missed calls will be displayed at the status bar.
Call waiting	Set whether to enable the call waiting function.
Voicemail	Set the parameters of the voicemail:
	Check for voicemail: Check which line enabled
	the voicemail, you can also enable it from here.
	Number to dial for checking voicemail: Set the
	phone number to listen the voicemail for each line.
	Number for sending calls to voicemail: Set the
	phone number of the voicemail for each line.
No answer time	Set no answer time. The default unit is second.
Digital map	Use E164: Enable/Disable E164. After it is
-	enabled, it will directly dial numbers according
	with E164 rules.
	Use # as dial key: Enable/Disable. After enabling
	the function, input the number end with "#" in the
	non-pre-dial mode, it will directly dial the phone
	number.
	Use fixed length: Enable/Disable. After enabling
	the function, inputting the number of specified
	length in the non-pre-dial mode will make the call
	directly.
	Dial with fixed-length : Enter the number of fixed
	length(1-30)
	Use time out: Enable/Disable.
	Dial timeout (3-99) : After enabling the function,
	input the number in the non-pre-dial mode, it will
	dial the phone number in the specified time.
	Dial plan prefix : Enable/Disable. After enabled
	the function, it will be automatically added the
	outside line prefix number before the outgoing
	number when you are going to call.
	Outside line prefix: Input the prefix number
Hotline number	Hotline number: Set the hotline number for each
Hound number	SIP line.
	Hotline timeout (0-99): Set the waiting time of the
	104

	hotline number after hooking off, if the number is
	not set, the default time is 0, and then it will
	immediately call the hotline number.
Reveal incoming	After enabling the call attribution show, and when
telephone place	a call comes in, the incoming interface can display
	the attribution information of the caller's number.

Note:

 Enable "DND", "Auto answer" and "call forward" at the same time, the transfer effect priority is "DND" >> "Auto answer">>> "call forward".
 Digital Map : "Use E164", "End with #", "Use fixed length", "Use time out" are in effect under the condition of non pre-dial.

Advanced settings

Location & security

Tap "Advanced Settings" and then select "location and security" switch to the location and security settings interface.

Configuration item	Meaning	
Set menu password	Set the password to enter the configuration items.	
Visible password	Show password as you type.	
Use secure	Allow applications to access secure certificates and	
credentials	other credentials.	
Install from SD card	Install encrypted certificates from SD card.	
Set password	Set or change the credential storage password	
Clear storage	Clear credential storage of all contents and reset its	
	password.	

Default configuration password: 123456.

Privacy

Tap "Advanced Settings" and then select "Privacy" switch to the privacy settings interface.

Configuration item	Meaning	
Factory data reset	Clear all user information on the phone, and the entire	
	configuration to the default configuration.	
Reboot	Click to restart the phone.	

Applications

Tap "Advanced Settings" and then select "Applications" switch to the application settings interface.

Configuration item	Meaning		
Unknown sources	Allow install of non-Market application		
Manage	Manage and remove installed application		
applications			
Running services	View and control current running services		
Development	Set options for application development		
	USB debugging: Debug mode when USB is		
	connected.		
	Allow mock locations: Allow mock locations.		

Accounts & sync

Tap "Advanced Settings" and then select "Account & sync" switch to account and sync settings interface.

Configuration item	Meaning
Background data	Application can sync, send and receive data at any
	time.
Auto-sync	Application sync data automatically.
Add account	You can configure an Exchange account.

SD card and memory

Tap "Advanced Settings" and then select "SD card and memory" switch to the

	8	
Configuration item	Meaning	
Total space	Display the size of the total storage capacity of the	
	SD card.	
Available space	Show the remaining available storage space size of	
_	SD card.	
Unmount SD card	Must uninstall SD card at first, then you can	
	remove it safely.	
Format SD card	Format (erase) the SD card.	
Internal phone	Show the total memory size of the phone.	
storage	- -	
Available space	Show the available phone memory space.	

Search

Tap "Advanced Settings" and then select search" switch to search settings interface.

Configuration item	Meaning			
Google search	Show page proposal: When enabled, it displays the			
settings	advice that Google propose when inputting.			
Searchable items	You can choose to search content on the phone,			
	including: browser, contacts, applications and			
	music.			
Clear search	Clear shortcuts of the search results chosen			
shortcuts	currently.			

Tap "search" to switch to search settings interface.

About phone

Tap "Settings" and then select "About phone" switch to About Settings interface.

Advanced SIP Setting interface

	Sip Configuration
Field name	Explanation
SIP Line SI	P 1 💌
Choose line to set	info about SIP, there are 4 lines to choose.
Basic Settings	
Status	Shows whether the phone has been registered the SIP server, if not, show Unapplied.
Server Address	Input your SIP server address.
Server Port	Set your SIP server port.
Authentication User	Input your SIP register account name.
Authentication Password	Input your SIP register password.
SIP User	Input the phone number assigned by your VoIP service provider. Phone will not register if there is no phone number configured.
Display Name	Set the display name.
Enable Registration	Enable/Disable resistration.
Domain Realm	Set the sip domain if needed, otherwise this VoIP phone will use the Register server address as sip domain automatically. (Usually it is same with registered server and proxy server IP address).
Proxy Server Address	Set proxy server IP address. (Usually, Register SIP Server configuration is the same as Proxy SIP Server. But if your VoIP service provider give different configurations between Register SIP Server and Proxy SIP Server, you need make different settings)
Proxy Server Port	Set your Proxy SIP server port.
Proxy User	Input your Proxy SIP server account.
Proxy Password	Input your Proxy SIP server password.
Backup Server Address	Phone backup server address, if the primary server is not successfully registered then enabled the backup server.
Backup Server port	Configure the backup server port.
Server Name	Set the server name. It is displayed on the dialer interface.
Advanced SIP Se	
SIP	Enable/Disable Signal encryption.

Sip Configuration

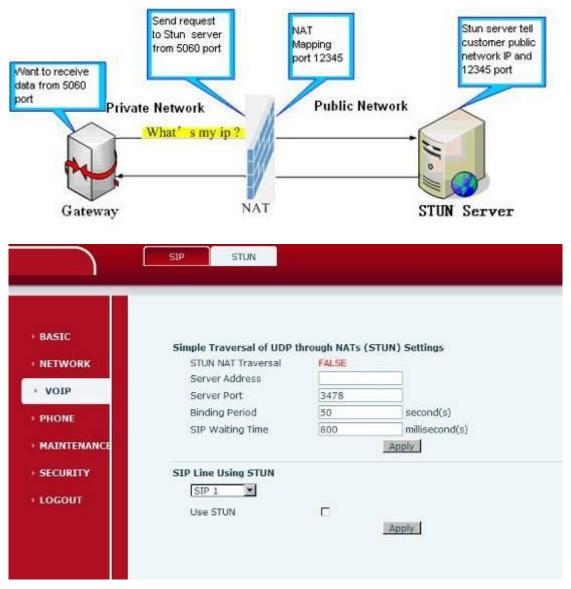

Encryption	
SIP	
Encryption	Set the key for signal encryption.
Key	
RTP	
Encryption	Enable/Disable RTP encryption.
RTP	
Encryption	Set the key for RTP encryption.
Key	5 51
Enable BLF	
List	Enable/Disable BLF List.
BLF List	
Number	Input the BLF List number.
Keep Alive	Select the keep alive type, if the type is SIP option,
Type	the phone will send option sip message to server every
	NAT Keep Alive Period(s), then the server responses
	with 200 to keep alive. If the type is UDP, the phone
	will send UDP message to server to keep alive every
	NAT Keep Alive Period(s).
Keep Alive	Set examining interval of the server, default is 60
Interval	seconds
Usor A gont	Set the user agent if you have, the default is VoIP Phone
User Agent	1.0.
	Select DTMF sending mode, there are three modes:
	* DTMF_RELAY
DTMF Type	* DTMF_RFC2833
	* DTMF_SIP_INFO.
	Different service providers may provide different mode.
Local Port	Set sip port of each line.
Anonymous	Set Anonymous call out safely; Support RFC3323 and
Call Edition	RFC3325.
Enable report	Enable or disable system to support RFC3581. Via
	report is a special way to realize SIP NAT.
Enable	Enable/Disable SIP PRACK function (basically is used
PRACK	at). Suggest using the default configuration.
Enable Long	Set more parameters in contact field, connect with SEM
Contact	server.
Convert URI	Convert # to %23 when send the URI.
Dial Without	Enable/Disable Dial without Register. If enabled, you
Registered	can call directly the gateway.
Ban	
Anonymous	Set to ban anonymous Call.
Call	

Enable DNS SRV	Support DNS looking up with _sip. udp mode	
Enable	Enable/Disable Session Timer to support RFC4028 or	
Session Timer	not. It will refresh the SIP sessions.	
Session		
Timeout	Set the time out of the session.	
Conference		
Туре	Select "Local" or "Remote".	
Conference		
Number	Input the number of the conference.	
Subscribe for		
MWI	Enable/Disable the subscribe for MWI.	
MWI Number	Input MWI number.	
Subscribe	Overtime of resending subscribe packet. Suggest using	
Period	the default configuration.	
	Set expire time of SIP server register, default is 60	
	seconds. If the register time of the server requested is	
Registration	longer or shorter than the expire time, the phone will	
Expires	change automatically the time into the time	
	recommended by the server, and register again.	
	Select the special type of server which is encrypted, or	
Server Type	has some unique requirements or call flows.	
	Select SIP protocol version to adapt for the SIP server	
	which uses the same version as you select. For example,	
RFC Protocol	if the server is CISCO5300, you need to change to	
Edition	RFC2543, else phone may not cancel call normally.	
	System uses RFC3261 as default.	
Transport	System uses Kreszor as derault.	
Protocol	Set transport protocols, TCP or UDP.	
1100000	Enable or Disable. Keep Authentication. If it is enabled,	
	system will take the last authentication field which is	
Кеер	passed the authentication by server to the request	
Authentication	packet. It will decrease the server's repeated	
	authorization work	
Click to talk	Set click to Talk (need practical software support).	
	Enable/Disable the function. When call is incoming,	
Ans. With a	phone replies SIP message with just one codec which	
Single Codec		
	phone supports.	
Auto TCP	Set to use automatically TCP protocol to guarantee	
	usability of transport when message is above 1300 byte.	
Enable Strict	Support the special SIP server-when phone receives the	
Proxy	packets sent from server, phone will use the source IP	
	address, not the address in via field.	

Enable GRUU	Set to support GRUU.		
Enable	Set to make quotation mark to display name as the		
Display name	phone sends out signal, in order to be compatible with		
Quote	server.		
Enable	Enable user=phone by selecting it, it is contained in the		
user=phone	invite sip message, in order to be compatible with		
user-phone	server.		

• Stun Configuration

By STUN server, the phone in private network could know the type of NAT and the NAT mapping IP and port of SIP. The phone might register itself to SIP server with global IP and port to realize the device both calling and being called in private network.

STUN interface

	STOR
Field name	Explanation
Simple Traversal of U	DP through NATs (STUN) Settings
STUN NAT	Shows STUN NAT Transverse estimation, true
Transversal	means STUN can penetrate NAT, while False
	means not.
STUN Server	Sat your SID STUN Saryar ID address
Address	Set your SIP STUN Server IP address.
Server Port	Set your SIP STUN Server IP port.
	Set STUN Binding Period . If NAT server finds
	that a NAT mapping is idle after time out, it will
Binding Period	release the mapping and the system need send a
	STUN packet to keep the mapping effective and
	alive.
	When use stun, call waiting for the response of the
SIP Waitting Time	stun overtime time.
Use Stun	Enable / disable SIP STUN.
Note: SIP STUN is use	d to realize SIP penetration to NAT. If your phone
configures STUN Serve	er IP and Port (default is 3478), and enable SIP Stun,

STUN

you can use the ordinary SIP Server to realize penetration to NAT.

AUTO PROVISION			
Field name	Explanation		
Auto Update Settin	gs		
Current Config Version	Show the current config file's version. If the version of the configuration downloaded is higher than the version of the running configurations, the auto provision would upgrade, or stop here. If the endpoints confirm the configuration by Digest		

	method, the endpoints wouldn't upgrade		
	configuration unless the configuration in the		
	server is different with the running configuration.		
	Show the common config file's version. If the		
	configuration downloaded and the running		
	configurations are the same, the auto provision		
Common Config	would stop here. If the endpoints confirm the		
Version	configuration by Digest method, the endpoints		
	wouldn't upgrade configuration unless the		
	configuration in the server is different with the running configuration.		
CPE Serial	Shows the Serial CPE number. It depends on the		
Number	server.		
	Specify FTP/HTTP/HTTPS server Username.		
User	System will use anonymous if username keep		
	blank.		
Password	Specify FTP/HTTP/HTTPS server Password.		
Config	Input the Encrypt Key, if the configuration file is		
Encryption Key	encrypted.		
Common Config	Input the Common Encrypt Key, if the Common		
Encryption Key	Configuration file is encrypted.		
Save Auto	Save the username and password authentication		
Provision	message of http/https/ftp and input ID message in		
Information	the phone until the url in the server changes.		
DHCP Option Settin			
	Specify DHCP Option. DHCP option supports DHCP custom option and DHCP option 66 and		
DHCP Option			
Setting			
Seeming	could choose one method among them , the		
	default is DHCP option disable.		
	A valid Custom DHCP Option is from 128 to		
Custom DHCP	254. The Custom DHCP Option must be in		
Option	accordance with the one defined in the DHCP		
	server.		
Plug and Play			
Enable PnP	Enable/Disable PNP.		
PnP Server	Specify the PnP Server		
PnP Port PnP Transport	Specify the PnP Server		
PnP Transport	Specify the PnP Transfer protocol		
PnP Interval Phone Flash	Specify the Interval time, unit is hour		
Server Address	Set FTP/TFTP/HTTP server IP address for auto		
Beivei Auuress			

	update. The address can be IP address or					
	Domain name with subdirectory.					
Config File Name	Set configuration file's name which need t update. System will use MAC as config fil name if config file name keep blank. Fo example, 000102030405					
Protocol Type	Specify the Protocol type FTP、TFTP or HTTP.					
Update Interval	Specify update interval time, unit is hour.					
Update Mode	 Different update modes: 1. Disable: means no update 2. Update after reboot: means update after reboot. 3. Update at time interval: means periodic update. 					
TR069 Settings						
Enable TR069	Enable TR069 by selecting it.					
ACS Server Type	Specify the ACS Server Type.					
ACS Server URL	Specify the ACS Server URL.					
ACS User	Specify ACS User.					
ACS Password	Specify ACS Password.					
TR069 Auto Login	Enable TR069 Auto Login by selecting it.					
"Inform" Sending	Specify the "inform" Sending Period, unit is					
Period	second.

SYSLOG interface

Syslog Configuration				
Field name	Explanation			
Syslog Settings				
Server IP	Set Syslog server IP address.			
Server Port	Set Syslog server port.			
MGR Log Level	Set the level of MGR log.			
SIP Log Level	Set the level of SIP log.			
Enable Syslog	Select it or not to enable or disable syslog.			
Web Capture				
Start	Click the start button when you need capture the WAN			
	packet stream of the phone, then open or save the file			
	as the interface.			
Stop	Click the end button to stop capturing the packet			
	stream.			

Note:

Syslog is a protocol which is used to record the log messages with client/server mechanism. Syslog server receives the messages from clients, and classifies them based on priority and type. Then these messages will be written into log by some rules which administrator can configure. This is a better way for log management.

8 levels in debug information:

Level 0---emergency: This is highest default debug info level. You system cannot work.

Level 1---alert: Your system has deadly problem.

Level 2---critical: Your system has serious problem.

Level 3---error: The error will affect your system working.

Level 4---warning: There are some potential dangers. But your system can work.

Level 5---notice: Your system works well in special condition, but you need to check its working environment and parameter.

Level 6---info: the daily debugging info.

Level 7---debug: the lowest debug info Professional debugging info from R&D person.

At present, the lowest level of debug information is info; debug level only can be displayed on telnet.
