Video Intercom Configuration

IP Intercom Topological Graph

Users can call the same group of people through the VOIP phone, PC or mobile phone SIP phone software, and realizes remote control to the device. (Such as a door lock, Alarm lamp etc.)

Video Intercom Configuration

Step One: Confirm the equipment connection

Make sure the correct connections of power cord, network cable, etc and make a normal power on startup.

Refer to status table below for device working check:

LED Icon	Description	Working Status
	DSS key LED	Network error: Blink with 2s Network running: Off Registration failed: Blink with 6s Registration succeeded: On

Step Two: Get the device IP Address:

Methods 1:

Use the IP scanning tool to get IP address,

- 1) Install the scanning tool which will be found in the CD of (English\iDoorPhoneNetworkScanner setup V1.0.exe).
- 2) Ensure the computer, which running the IP scanning tool, is in the same local network with the corresponding device.
- 3) Run the tool (iDoorPhoneNetworkScanner.exe) to search the IP address of corresponding device within the network.

Method 2:

Press and hold "#" key for 3 seconds and the door phone will report the IP address by voice.

(Note: when power on, 30s waiting is needed for device running. After it, method 2 can be worked.)

Step Three: Log in the door phone

Input IP address (e.g. http://192.168.1.149) into address bar of PC's web browser. The default user name and password are both admin.

Video Intercom Configuration

Step Four: Add SIP account

Set SIP server address, port, user name, password and SIP user with assigned SIP account parameters. Select <enable registration>, click <Apply> to take effect.

SIP Line: SIP 1

Basic Settings >>

Status	Registered
Server Address	172.18.1.88
Server Port	5060
Authentication User	8005
Authentication Password	*****
SIP User	8005
Display Name	8005
Enable Registration	<input checked="" type="checkbox"/>

Advanced SIP Settings >>

Apply

SIP Global Settings >>

Step Five: Set DSS key

Set the DSS key as below for a quick start. Click <Apply> to take effect.

Type: Hot Key.

Number1: the DSS Key will dial to.

Number2: call will be forwarded to, if number1 is unavailable.

Line: working line.

Subtype: Speed Dial.

FUNCTION KEY MEDIA DND FEATURE MCAST Action URL

Key	Type	Number 1	Number 2	Line	Subtype	Media
DSS 1	Hot Key	602		SIP1	Speed Dial	DEFAULT
DSS 2	Hot Key	192.168.2.100		SIP1	Speed Dial	DEFAULT
DSS 3	None			SIP1	None	DEFAULT
DSS 4	None			SIP1	None	DEFAULT

Apply

Video Intercom Configuration

Step Six: Set the security function

> The two short circuits input configuration method

WEB→Safeguarding, As shown in the figure below

The screenshot shows the 'Safeguarding' configuration page. On the left, a navigation menu includes NETWORK, VoIP, INTERCOM, and SAFEGUARDING (selected). The main area is divided into 'Input Settings' and 'Output Settings'. In the 'Input Settings' section, 'Input 1' and 'Input 2' are both checked. Their 'Trigger Mode' is set to 'Low Level Trigger(Close Trigger)' and their 'Response Mode' is set to 'Remote Response'. The 'Output Settings' section shows 'Output 1' checked with 'Output Level' set to 'High Level(NO:closed)' and 'Output Trigger Mode' checked for 'Input 1 Trigger'. 'Output 2' is unchecked, and its 'Output Duration' is set to 5 seconds.

Function		Description
Trigger mode	Low Level Trigger (Close Trigger)	Double short circuit detection port(If it is single port, is the low level)Detection to trigger when closed
	High Level Trigger (Disconnect Trigger)	Double short circuit detection port(If it is single port, is the high level)Detection to trigger when disconnect
	Remote Response	When meet the input port to trigger condition, to the server sends the alarm information correspondence. [note] Input port1 trigger, to send command format: The trigger device the IP; Port=Input1 Input port2 trigger, to send command format: The trigger device the IP; Port=Input2

> The two short circuits output configuration method

The screenshot shows the 'Safeguarding' configuration page, specifically the 'Output Settings' section. The left navigation menu is the same as in the previous screenshot. Under 'Output Settings', 'Output 1' and 'Output 2' are both checked. For 'Output 1', 'Output Level' is 'High Level(NO:closed)', 'Output Duration' is 5 seconds, and 'Output Trigger Mode' is checked for 'Input 1 Trigger'. It also has 'Remote DTMF Trigger' (1234), 'Remote SMS Trigger' (ALERT=OUT1_SOS), 'Call State Trigger' (Talking), and 'Emergency Key Trigger' checked. For 'Output 2', 'Output Level' is 'High Level(NO:closed)', 'Output Duration' is 5 seconds, and 'Output Trigger Mode' is checked for 'Input 2 Trigger'. It also has 'Remote DTMF Trigger' (5678), 'Remote SMS Trigger' (ALERT=OUT2_SOS), 'Call State Trigger' (Talking), and 'Emergency Key Trigger' checked.

Video Intercom Configuration

Function		Description	
Output level	Low Level (NO: always on)	When meet the trigger condition, trigger the NO port disconnected.	
	High Level (NO: always off)	When meet the trigger condition, trigger the NO port close.	
Output Duration	1~600S	Define the output Duration change of output port.	
Output trigger mode	Input port1 trigger		
	Input port2 trigger		
	Remote DTMF trigger	By duration	Received the terminal equipment to send the DTMF password, if correct, which triggers the corresponding output port (The Port level time change, By < Output Duration> control)
		By Calling State	During the call, receive the terminal equipment to send the DTMF password, if correct, which triggers the corresponding output port (The Port level time change, By call state control, after the end of the call, port to return the default state)
	Remote SMS trigger		
	Call state trigger		
	Emergency key trigger		

> The tamper detection configuration method

Tamper Alarm Settings

Tamper Alarm
 Alarm command
Tamper_Alarm
Reset command
Tamper_Reset
Reset

Function	Describe
Tamper Alarm	When the selection is enabled, the tamper detection enabled
Alarm command	When detected someone tampering the equipment, will be sent alarm to the corresponding server
Reset command	When the equipment receives the command of reset from server, the equipment will stop alarm
Reset	Directly stop the alarm from equipment in the Webpage

Video Intercom Configuration

> The trigger ring type setting

Server & Trigger Ring Type Settings

Server Address	<input type="text" value="0.0.0.0"/>	Input 2 Trigger Ring	<input type="text" value="default"/>
Input 1 Trigger Ring	<input type="text" value="default"/>	Remote SMS Trigger Ring	<input type="text" value="default"/>
Remote DTMF Trigger Ring	<input type="text" value="Disable"/>	Alarm Ring Duration	<input type="text" value="5"/> (1~600) s
Tamper Alarm Ring	<input type="text" value="default"/>		

Function	Description
Server Address	Configure remote response server address(including remote response server address and tamper alarm server address)
Input 1 trigger ring	When the input port 1 triggering condition is satisfied, the corresponding ring tone or alarm
Input 2 trigger ring	When the input port 2 triggering condition is satisfied, the corresponding ring tone or alarm
Remote DTMF trigger ring	When received the remote DTMF command, whether to output the ringtone
Remote SMS trigger ring	When receiving the remote SMS instructions, whether to output the ringtone
Tamper alarm ring	When the detected someone tampering the equipment, plays the corresponding ringtone or alarm
Alarm duration	Duration of alarm ring(not including tamper alarm)

> Set custom ringtones

You can access to webpage to change the ringtone: WEB →Intercom→MEDIA

File format: wav, single channel 8Khz sampling.

The file name, ring1: 1.wav(the ring2 replacement, file name: 2.wav)

Video Intercom Configuration

> The broadcast terminal configuration notice

1) How to avoid an incoherency sound when the broadcast playing?

When the terminal use as broadcast, the speaker is loud, if not set mute for microphone, the AEC (echo cancellation) of equipment will be activated, which leads the sound incoherence. In order to avoid such circumstance, when the equipment turn to use as radio should be set as intercom mode, and activate the intercom mute, so as to ensure the broadcast quality.

Feature Settings

Ban Outgoing	<input type="checkbox"/>	Select MemoryKey Action	HangUp
Enable Telnet	<input type="checkbox"/>	Select Your Tone	United states
Enable Intercom Mute	<input checked="" type="checkbox"/>	Enable Intercom Tone	<input checked="" type="checkbox"/>
Default Ans Mode	video	Default Dial Mode	video
Enable Auto Answer	Line1 and Line2	Auto Answer Timeout	0 (0-60s)

Apply

2) How to improve broadcasting tone quality?

In order to obtain better broadcast quality, recommend the use of the HD (G.722) mode for broadcast.

Voice bandwidth will be by the narrow width (G.722) of 4 KHZ, is extended to broadband (G.722) 7 KHZ, when combined with the active speaker, the effect will be better.

Audio Settings

First Codec	G.711A	Second Codec	G.711U
Third Codec	G.722	Fourth Codec	G.722
DTMF Payload Type	101 (96-127)	AMR Payload Type	10B (96-127)
ILBC Payload Type	97 (96-127)	ILBC Payload Length	20ms
G.723.1 Bit Rate	6.3kb/s	G.729AB Payload Length	20ms
SPK Output Volume	5 (1-7)	Broadcast Output Volume	5 (1-7)
Signal Tone Volume	3 (1-7)	Enable VAD	<input type="checkbox"/>
